

Welcome to The Play Spot adventure!

In a world moving faster than ever, purposeful play has never been more important. At LEGO® Education, we believe learning should be active, engaging, and hands-on—and play is what brings it to life. Through playful learning, students develop creativity, critical thinking skills, and the confidence to succeed, both in the classroom and beyond.

For more than 45 years, LEGO Education has provided educators with the tools and support to create impactful, playful learning experiences. Our goal is simple: to ensure every student has access to quality, hands-on opportunities that drive real learning outcomes. We want to ensure purposeful play is an integral part of every learning journey, empowering all students to thrive.

In celebration of the UN-recognized International Day of Play on June 11, we're excited to introduce The Play Spot adventure as part of our World Play Day celebration. This series of engaging activities invites students to reimagine and redesign overlooked community spaces as creative play zones in the weeks leading up to World Play Day. Throughout this experience, students will use STEAM skills to imagine, innovate, and collaborate—all while tackling real-world challenges. Our ready-to-go activities are based on materials you likely already have on hand and are flexible enough to fit into even the tightest classroom schedule—with a range of options to dive even deeper with your students. Along the way, we invite you to share your students' creative ideas, prototypes, and designs in honor of World Play Day.

We'd love for you to join us for The Play Spot adventure. Together, we can build a future where play is at the heart of learning.

Let's get started!
